

## PNG FOREST IS VERY RICH FOREST COMPARED WITH FORESTS FROM OTHER COUNTRIES

It has large numbers of plant, animal and insect species and communities. There are many plants, animals, and insects endemic to Papua New Guinea

### THE FOREST OF EUROPEAN COUNTRIES

Their forests are very different from PNG's forests because the climate is different. The climate in Europe in countries like England and Czech Republic is cold.

The woody forest  
Palava region, Czech  
Republic, Europe  
In this forest there  
is small number  
of plant and  
insects species

■ **below :**

The grassland.  
(Meadows)  
There is higher  
number of plants  
and insect species  
than in the forest

### PNG'S TROPICAL RAIN FOREST

PNG is the tropical country and its diversity is very high, similar to other tropical countries.

Most biologists and scientists think that PNG is one of a few countries with richest diversity and most of its plants and animal not recorded and known from other countries and not known to science.
